

LaserWell® Plus

Our Most Popular ID Card for High-Speed Laser Printing Systems

LaserWell Plus membership cards, like LaserWell membership cards, are a unique combination of materials providing the ultimate patented membership ID card solution for personalization on high-speed laser printers. The high-tech design features a debossed “well” or cavity into which the plastic (synthetic) membership card is affixed, making the overall document coplanar. This patented construction means LaserWell Plus membership ID cards run smoothly through high-speed laser printers for jam-free personalization. LaserWell Plus membership identification cards are also available for imaging on high speed continuous laser printing and publishing systems. For orders over 100M, two wide formats may improve efficiencies. LaserWell Plus membership ID cards for continuous printers are available in a variety of form sizes to meet your specifications.

WindoWell®

Looking to image variable information on the back of your LaserWell cards? WindoWell, a unique variation of LaserWell membership identification card is the answer. A 2 5/8 x 1 3/8 inch “window” is die cut into the form to allow duplex imaging on the backside of the card. WindoWell documents are available in the 1-Up and 2-Up standard formats.*
