

LaserWell®

Our Most Popular ID Card in a Wide Variety of Sizes and Paper Stocks

LaserWell membership ID card documents are a unique combination of materials creating the ultimate membership card solution for personalization on network laser printers. The high-tech document design features a debossed “well” or cavity into which the plastic (synthetic) membership card is affixed, making the overall document coplanar. This patented construction means LaserWell membership ID cards run smoothly through network laser printers for jam-free personalization. Each LaserWell membership card document can be manually fed one at a time on demand or batch processed from the paper tray. This processing flexibility equals higher productivity and lower usage costs.

WindoWell®

Looking to image variable information on the back of your LaserWell cards? WindoWell, a unique variation of LaserWell membership identification card is the answer. A 2 5/8 x 1 3/8 inch “window” is die cut into the form to allow duplex imaging on the backside of the card. WindoWell documents are available in the 1-Up and 2-Up standard formats.*
